# A NEW APPROACH TO FIGHTING INSIDER THREAT

## The Complete User Behavior Intelligence Platform that combines technology, intelligence, and services to provide cutting-edge protection from user threats

Organizations are struggling to fight insider threats. Many turn to heavy data loss prevention solutions, but those provide no insight into user behavior, leaving significant blind spots. Some organizations install user behavior analytics or SIEM systems for further intelligence, but those have a critical gap as well: their data.

Instead of trying to pull insights out of existing flawed data, our platform provides visibility specifically around insider threats from the point closest to the user: the endpoint. The platform deploys a lightweight collector to monitor user activity. Then, it feeds that data into unique analytics, which include over 1,000 patterns of known bad behavior, activity baselining, and alert stacking to identify strings of suspicious activity. Through this unique combination, the platform is able to provide intelligence that currently unparalleled by any other security tool on the market.

### CATCH THE EARLY SIGNS

Most tools focus on stopping data theft at the point of exfiltration. The platform, however, looks for the full picture, including phases of the Insider Threat Kill Chain before the data theft itself. Through risk scoring and alert staking, the platform recognizes suspicious sequences of events that may indicate an impending attack.

### UNDERSTAND FULL CONTEXT

Understanding context is the sum of understanding what a user did, the sequence of those actions, and whether they were normal or abnormal for that particular user. Most tools don't have the data to accurately give you that insight, but the platform visibility and analytics show you the full context around an action. With the platform, organizations can understand the "how?" and "why?" around security incidents.

### PROTECT USER PRIVACY

Security and visibility don't have to come at the cost of user privacy. The platform collects data in the form of metadata, and includes an optional anonymization process that hides all identifying personal information from user activity data. This data can only be "unlocked" by a pre-determined keyholder, protecting user privacy. In fact, the platform is used under some of the strictest privacy laws in the world.

### USER DATA COLLECTOR

The platform collects data using an ultra-lightweight collector on the endpoint. This collector is tiny enough that it deploys in just hours, and it has almost no network impact. This allows the platform to have visibility into user activity both on and off the corporate network.

### PRIVACY COMPLIANCE

The platform doesn't include keylogging, screenshots, or any other invasive information. Even better, it has an optional anonymization process that strips out all metadata that can be used to identify an individual. As a result, the platform is deployed even in countries with the strictest privacy laws.

### EXPERT LIBRARY

The platform includes more than 5,000 patterns of known bad behavior that have been collected from real-world investigations. These patterns allow the platform to quickly and effectively pinpoint known-bad behavior from day one.

### USER BEHAVIOR

The platform includes advanced user behavior intelligence. This intelligence automatically baselines normal user activity and identifies anomalies. This allows it to detect and alert on the "unknown unknowns" — never-before-seen suspicious behavior.

### ALERTS & HUNT

The platform dashboard gives you a complete view of your organization at a glance. The platform also includes targeted alerts, so your team is quickly alerted to high-risk activity. The platform also fully integrates with SIEM data, so you can keep all of your data under a single dashboard and alert system.

### EXPERT ANALYSTS

The platform's expert analysts provide ongoing support to your team. They oversee the platform's installation and tuning, and help you with investigations. They also will help manage your alerts and periodically create User Threat Assessment Reports to show you significant threats in your enterprise.

## PRICING & PLANS

### A Configuration for Enterprises starting from 250 users

We offers three different configurations, each specifically tailored to meet a certain set of needs. These range from a simple but effective visibility-only plan to a fully-integrated, complete service. Starting from 250 users.

#### **SIGNAL** Pure Visibility

Signal offers unparalleled user visibility and user behavior intelligence, without the inclusion of the platform UI, anonymization, expert services, or other additional features. The platform ultra-lightweight collector gives you on-and-off-network visibility that you can't get from log files or SIEM systems. This is the best way to get pure user visibility straight from the source. You can feed this data into your other security systems, like User Behavior Analytics platforms or SIEM systems, to ingest the platforms data and alerts within your existing single pane of glass.

##### **SIGNAL IS FOR YOU IF:**

You want complete user visibility, on and off the network, on Windows and Mac.

You have existing systems and dashboards, and want to cover your blindspot by collecting user activity directly from the endpoint.

You're looking for a simple but effective User Behavior Intelligence solution.

#### **ENTERPRISE** Interface, Dashboards, and Expertise

Enterprise is the complete solution, including user visibility, user behavior analytics, alerting, and expert analysts. It all starts with the endpoint visibility that you get from Signal, through our lightweight collector. But the Enterprise Plan builds upon that to give you the most value for that visibility. Cut through the noise with targeted alerts based on user behavior baselining and analytics. Plus, you'll get the expert help of a team of analysts to help you manage and interpret your results — so your team won't be overwhelmed by alerts and data.

##### **ENTERPRISE IS FOR YOU IF:**

You want alerts and analytics to cut through the noise, minimize false positives, and target the real risks in your organization.

You want expert analyst services to supplement your security team.

You want features such as anonymization and user quarantine.

#### **PLATINUM** The Complete, Custom Solution

Platinum builds upon Enterprise with seamless, custom integration in your existing security landscape. Platinum is the most advanced configuration of the platform for the enterprise that wants a complete security solution. The platforms experts will work with you to develop custom integrations based on your specific security needs. You'll also receive the highest level of support, and deep-dive User Threat Assessment analysis into your alerts and user activity.

##### **PLATINUM IS FOR YOU IF:**

You're looking for a complete, seamless, fully-integrated security platform.

You want highly-involved expert analysts to provide ongoing, in-depth data analysis.

## ABOUT AUMATICS

The world around us is changing at an unprecedented pace. New developments in ICT play a major role in this. Organisations have to respond ever faster to these changes. As professional providers of ICT services, we at Aumatics understand this better than anyone. We have configured our organisation in such a way as to be close to our clients. Not as a supplier, but as a full partner. So that we can respond quickly to a changing world together with our clients. We want to raise this proposition and partnership to the next level with them. We are going to get even closer to our clients. We want to 'grow together'.

### Mutual ties

We have arranged our entire organisation and service provision in such a way as to grow with our clients, and to promptly anticipate things together with them. We do that by intensifying our relationship with multiple occasions for contact. By offering the right tools at the right moment, and by guiding them in an interactive process. We monitor and know what is important and what is currently happening, and we have respect for each other's problems and challenges. Growing together is a priority in the total strategy of Aumatics and its staff. These mutual ties form the fundamental value of our collaboration with our clients!

### Moving in tandem

We at Aumatics know that the application of innovative technology can accelerate growth if it is used in the correct way. For example, technology can help to make organisations scalable, or to organise processes more efficiently. To get a good picture of its possibilities, we, like Aumatics, first must understand where our client stand at present and, above all, what its vision and ambitions are. Where do the opportunities lie, and what are the challenges: now and in the future? That's why we want to be even closer to our clients, by contributing our ideas and, above all, by moving in tandem with them.

## GET IN TOUCH

Drop us an email, give us a call, or stop by for a visit. We would love to hear from you.
